

BRANDED MERCHANDISE MADE FROM
SUGAR & MAIZE PRODUCTION WASTE

bio polymer

A SUGARCANE
BYPRODUCT

**MADE IN
BRITAIN**

BIO-POLYMER

Bio-polymer merchandise is a revolutionary plant-based material derived from sugar and maize feedstock by-products that delivers the strength and durability of traditional plastics, without the environmental legacy. This majority plant-based material is formulated to match the performance of conventional plastics whilst being designed to break down naturally.

- > UK MANUFACTURED FROM RENEWABLE PLANTBASED MATERIALS
- > SOLAR-POWERED PRODUCTION FACILITY
- > NATURALLY BIODEGRADABLE
- > CMYK PRINTING AS STANDARD
- > CARAMEL SCENT TO FINAL PRODUCTS

Bio-polymer begins its journey as a renewable by-product of sugar and maize feedstock processing. Once pellets arrive at the solar-powered manufacturing facility, something remarkable happens – as promotional merchandise is moulded, the factory fills with the distinctive sweet aroma of sugar and caramel, a reminder that these products come from nature.

Available across our most popular keyrings and trolley coins, bio-polymer merchandise offers genuine innovation. This isn't greenwashing – it's quality and performance whilst taking a significant step towards a fossil-free future.

Sugar & Maize Production By-Product

“From agricultural by-product to promotional merchandise, proving that sustainable innovation doesn't require compromise.

***Strong in use,
gentle in afterlife,
manufactured from renewable
resources that actively
sequester carbon as they grow.”***

BIO-POLYMER RETRO HOTEL KEYRING

BIO-POLYMER RETRO HOTEL KEYRING

- Always made from 100% sugar or maize feedstock production waste.
- Diamond shaped retro motel style keyring with steel ring.
- Large branding area to 1 or 2 sides, offering high visibility.
- Artwork digitally printed in CMYK as standard.

This keyring tells a powerful story. Made from plant-based bio-polymer derived from sugar and maize feedstock byproducts, it now serves as both a practical promotional keyring and a conversation starter about renewable materials and sustainable innovation. The subtle sweet scent of caramel that these products carry is a distinctive reminder of their natural sugarcane origins. Your brand becomes synonymous with forward-thinking environmental responsibility.
